**Team Bongo Gang** · AI-GNITION 2026
Problem Statement 1 · Built on MantaGO (Eslitec)

# Message the right customers, say the right thing, prove it worked.

Nudgely picks who to message, writes what to say from each customer's own chats, and holds back a no-message group to prove it worked.

**+57%** visits
**Email vs no email**
Hillstrom · 64k online shoppers
Randomised · purchases about 1.9x

**+7%** visits
**SMS vs no SMS**
Lenta · 687k grocery customers
Randomised · 10.3% → 11.0%

**57%** vs 30%
**Extra visits caught by top 30%**
About 1.9x random · 7 test splits
Noisy: ranged 38–85%

## THE PROBLEM

Small shops send the same "*We miss you, 10% off*" to everyone. Discounts go to people who'd return anyway, messages ignore what customers said, and nobody knows if it worked.

**For:** small retail and F&B owners who message customers through MantaGO. Demo shop: **Kampung Fresh**, a fictional grocer in Tampines.

## HOW IT WORKS

1. **Pick who.** An uplift model finds customers a message will actually bring back.
2. **Remember what.** An LLM pulls tags from past chats, each quoting the chat word for word.
3. **Write it.** One short message each: apology first for complaints, max 10% off, opt-out line.

> Hi Aisha! Planning your son's end-of-Oct birthday party? 🎉 We have party snack packs ($12/$20) for easy celebrations! Good news, your favourite oat milk is back in stock too! Enjoy 10% off your next order.
>
> Reply STOP to opt out · sent to a teammate's phone via MantaGO in our demo

4. **Approve and send.** The owner confirms; MantaGO delivers on WhatsApp (approved templates) and stores each customer's tags. Demo sends reach only our test phones.
5. **Prove it.** A random 10% gets no message, so the real lift can be measured.

## WHY IT MATTERS

- More customers return per message sent
- No discounts wasted on customers who'd come back anyway
- Fewer paid WhatsApp messages
- A lift number checked against the shop's own no-message group

## RESPONSIBLE AI

- **Consent.** Live sends go only to our opted-in test phones. Every message ends "Reply STOP to opt out".
- **Privacy.** Names and phone numbers are scrubbed from chats; the writer sees only a first name.
- **Fairness.** No gender, age or children in the model.
- **Human in control.** Nothing sends until the owner confirms.
- **Singapore-ready.** Production adds PDPA consent records and DNC Register checks.

## BUILT WITH

MantaGO Open API · scikit-uplift · scikit-learn · Gemini · OpenRouter (free tiers) · Python · Streamlit

## LIMITATIONS AND NEXT STEPS

- Names and chats are fictional; evidence comes from overseas public datasets.
- The 57% is noisy (38–85%), so a 2–4 week pilot with a holdout group is next.
- The model needs one past message vs no-message test to learn from.
- **Next:** pilot with one Singapore MantaGO business and retrain monthly.
